Pt. 63, Subpt. IIIII, Table 5

40 CFR Ch. I (7-1-11 Edition)

	I .	l	1	I
Open-top containers.	a. At least once each 72 hours.	i. If you spill liq- uid mercury during collec- tion or trans- port, you must take the action specified in Table 3 to this subpart for liq- uid mercury spills and ac- cumulations.	ii. From the time that you collect liquid mercury into a temporary container until the time that you store the liquid mercury, you must keep it covered by an aqueous liquid.	iii. Within 4 hours from the time you collect the liquid mercury, you must transfer it from each temporary container to a storage container that meets the specifications in Table 1 to this subpart.
2. Vessels, low point drains, mercury knock- out pots, and other closed mercury collec- tion points.	a. At least once each week.	See 1.a.i through iii above.		
3. All other equipment.	a. Whenever maintenance activities re- quire the opening of the equipment.	See 1.a.i. through iii above.		

Table 5 to Subpart IIIII of Part 63—Required Elements of Floor-Level Mercury Vapor Measurement and Cell Room Monitoring Plans

Your Floor-Level Mercury Vapor Measurement Plan required by 63.8192(d) and Cell Room Monitoring Plan required by 63.8192(g) must contain the elements listed in the following table:

You must specify in your plan	Additional requirements			
Floor-Level Mercury Vapor Measurement Plan				
Locations in the cell room where you will measure the level of mercury vapor.	The locations must be representative of the entire cell room floor area. At a minimum you must measure the level of mercury vapor above mercury-containing cell room equipment, as well as areas around the cells, decomposes, or other mercury-containing equipment.			
Equipment or sampling and analytical methods that you will use to measure the level of mer- cury vapor.	If an instrument or other equipment is used, the plan must include manu- facturer specifications and calibration procedures. The plan must also in- clude a description of how you will ensure that the instrument will be cali- brated and maintained according to manufacturer specifications.			
Measurement frequency Number of measurements	Measurements must take place at least once each half day. At least three readings must be taken at each sample location and the average of these readings must be recorded.			
5. A floor-level mercury concentration action level	The action level may not be higher than 0.05 mg/m³.			
Cell Room Monitoring Plan				
Details of your mercury monitoring system.				
2. How representative sampling will be conducted	Include some pre-plan measurements to demonstrate the profile of mercury concentration in the cell room and how the selected sampling locations ensure conducted representativeness.			
3. Quality assurance/quality control procedures for your mercury monitoring system.	Include a description of how you will keep records or other means to dem- onstrate that the system is operating properly.			
4. Your action level	Include the background data used to establish your level.
